

ABHISHEK SHINDE

Technical Lead & Project Manager · Services Delivery & Operations

+91-9175000242 · shinde.91a@gmail.com · Pune, India · [LinkedIn](#) · [shinde91a-portfolio.lovable.app](#)

Delivery operations leader with 12 years of experience building and running enterprise services portfolios across cybersecurity, healthcare, and technology sectors. Track record of owning delivery governance, leading PM teams, managing strategic enterprise accounts end-to-end, and driving operational turnaround without adding headcount. Currently serving as Technical Lead & Project Manager at Persistent Systems, embedded within Proofpoint's Professional Services organisation managing concurrent global engagements — from scoping through closure. Brings a practical AI advantage: independently designed and shipped a suite of AI-powered delivery tools — led by Sage Scheduler — solving real operational visibility and execution gaps.

CORE SKILLS

- Services Portfolio Governance
- Delivery Team Leadership & Mentoring
- Enterprise Account Ownership
- Escalation & Risk Management
- Capacity & Utilisation Planning
- Cross-functional Coordination
- Delivery KPI Ownership
- Stakeholder & Exec Communication
- Governance Framework Design
- SaaS Delivery Operations
- AI-Powered Delivery Tools
- Power BI · JIRA · Process Improvement

PROFESSIONAL EXPERIENCE

Technical Lead & Project Manager

Persistent Systems (Embedded at Proofpoint)

Feb 2025 – Present

Delivery operations lead within Proofpoint's Professional Services organisation. Responsible for portfolio governance, team operations, and enterprise account delivery across concurrent global engagements.

- Own the full services delivery portfolio across concurrent enterprise accounts — scoping, kick-off, execution, governance, and closure — ensuring on-time, in-scope delivery.
- Design and maintain delivery governance frameworks: stage gates, change control, risk/issue management, and decision logs — driving cross-functional alignment without imposing rigid silos.
- Serve as primary point of contact and senior escalation owner for enterprise clients; facilitate steering committee updates and executive communications with transparency and forward-looking risk narratives.
- Drive team utilisation and capacity planning — assessing real delivery capacity against committed timelines and making trade-off decisions when resource demand exceeds supply.
- Built standardised kick-off framework that eliminated scope ambiguity and established clear success criteria — reducing downstream rework, misalignment, and change disputes.
- Identify upsell and expansion opportunities within existing accounts and surface pipeline leads to Sales and account teams to grow services revenue.
- Apply self-built AI tools (Sage Scheduler, Opez Spotlight, Claude API) to improve documentation quality, summarise customer discussions, generate SOW inputs, track SLA compliance, and analyse project telemetry.

Team Lead — Healthcare Workforce Delivery Operations

ID Medical

Feb 2020 – Feb 2025

Advanced through three roles over five years running healthcare workforce delivery for NHS and private healthcare clients across the UK. Compliance-driven, zero-tolerance delivery environment.

- Inherited a declining delivery operation with unclear accountability — restructured team ownership model and drove measurable turnaround in performance without adding headcount.
- Built performance tracking and MIS infrastructure from scratch — surfaced the gap between reported metrics and actual workforce utilisation; used data to drive process redesign over headcount growth.
- Senior escalation owner for cases where standard procedures failed — making judgment calls under pressure that directly determined client and relationship outcomes.
- Led team through performance management, coaching, career development, and staffing decisions — building delivery discipline and professional growth simultaneously.

Process Executive

FarePortal (OneTravel)

Feb 2019 – Oct 2019

- Managed operations coordination during peak booking periods when volume spikes broke standard workflows.
- Redesigned handoff protocols across a distributed team to clarify decision ownership — improved throughput without adding headcount.

Customer Relationship Associate

Tech Mahindra Business Services

Jun 2018 – Jan 2019

- Owned technical incident resolution for enterprise accounts where SLA breaches triggered financial penalties.
- Built escalate-versus-resolve judgment framework based on risk assessment — managed client relationships through service failures with accuracy and transparency.

Sr. Associate Technical Support Engineer

IDeaS — A SAS Company

Jun 2014 – Nov 2017

- Delivered technical support for revenue management SaaS — system downtime directly impacted client bookings and pricing, making resolution speed and accuracy critical.
- Built operational reporting that surfaced actual versus expected system behaviour, identifying configuration drift before it caused client-facing outages.

AI BUILDER — SELF-BUILT OPERATIONAL TOOLS

Independently designed and shipped a suite of AI-powered operational tools using Claude API, Lovable, and Supabase — each solving a real delivery, scheduling, or execution gap observed firsthand in PS operations. All live as MVPs.

Sage Scheduler — AI-Powered PS Scheduling Copilot

- Reads inbound customer emails, interprets scheduling intent via Claude API, and checks live consultant availability through Microsoft Graph (Outlook) — auto-generating meeting invites and reply drafts. Collapses a multi-day, multi-email scheduling cycle into a 3-step workflow. Module 01 of a broader PS Operations Command Centre.

Opez Spotlight — Customer Onboarding SLA Tracker

- Turns a raw Excel onboarding file into a live SLA compliance dashboard — auto-calculates kickoff (15-day) and scheduling (3-day) SLA performance, tracks per-consultant targets, and surfaces an exception-sorted 'cases requiring attention' list with days-over-SLA detail. Replaces a weekly manual reporting cycle with a one-minute upload.

JARVIS Command Centre — Personal Execution OS

- A unified command centre managing 28 concurrent workstreams across status, priority, timeline, and productivity — with a Smart Alerts engine for overdue and stalled work and a natural-language AI command bar. Built to replace five fragmented tools with a single operational view.

Drawer — Workspace Command Center

- A keyboard-first universal launcher consolidating apps, websites, files, and workspaces into context-based collections with universal search and frequency intelligence — built to eliminate the constant friction of tool-switching across parallel workflows.
